Hi Piter, I just wanted to share this paper:

<https://ieeexplore.ieee.org/stamp/stamp.jsp?arnumber=11194047>. < I know that the paper focuses on inter domain, but it does reference other entanglement routing protocols. They also mention a packet based simulator, which I could envision having or not having much real value.

Also, did I ever share an overleaf paper template with you?

Thanks
-Dan
