Hi Dan,

Thank you for your interest in our work.

Attached is the source code for the EXPNeuralUCB from our paper "*Quantum Entanglement Path Selection and Qubit Allocation via Adversarial Group Neural Bandits*".

Please don't hesitate to reach out if you have any questions or need clarification as you work through the implementation.

Best regards,
Yin

Subject: Source Code for Quantum Entanglement Paper

[External Email]

Hi Lei and Yin, my name is [Dan Krutz](#) and I am an Associate Professor at the Rochester Institute of Technology. I've been in touch with Prof. Xu, and I was hoping that you could collaborate with one of our graduate students (Piter) regarding sharing the source code for your paper "Quantum Entanglement Path Selection and Qubit Allocation via Adversarial Group Neural Bandits". Our initial goal is to recreate some of your results/process, with our ultimate goal to implement some of the ML processes that we've created and implement a stochastic-focused study.

Obviously let me know of any questions.

Excellent paper by the way. Very informative and well written.

Thanks guys

-Dan
