Hi Piter, how are things going?

I found a few more papers for you to compare against (I didn't see references to these in the overleaf project)

- <https://ieeexplore.ieee.org/document/10621263> < Seems to be very relevant and uses bandits. At an initial glance, it seems that you may need to directly compare your work against these in the evaluation, but also talk about how your work is different/better.
- As I think I mentioned before, you'll want to do so the same for [this paper](#). You should likely do this sooner rather than later to make sure that you're not repeating efforts and that you're doing something truly innovate. <— You should also take a look at how they did their evaluations for ideas. They compared against some good/relevant noise models, baseline algorithms etc.... You will also want to directly compare the proposed work against the ones that they compared against (likely in an evaluation, but definitely in written form).
- I like how Wang first focused on path optimization and then did a separate evaluation for QKD. Something to consider for later on (I'd focus on path 1st to get some solid results).

Thanks
-Dan

Sorry, I thought you wanted to meet in the afternoon and took the time catch up on sleep.

How is the afternoon looking for you today? I can do morning tomorrow if that works better for you.

Piter

Would you be available at 10am still? Sorry for the late reply.

Hey Dan,

I am assuming we are still meeting today afternoon, so I will be online at 1pm today to see what time you'd want to meet.

My apologies, Dan,

I had a very late start today; I needed to recover some of the sleep lost. However, I can still meet you tomorrow at whatever time works best for you, just let me know.

Best,
Piter

Hi Dan,

My apologies for the
delay in my response.

I will give you a better
update as soon as I
finish the two papers I
need to submit this
Monday.

Quick update, there are
some things I have not
been able to properly
apply due to time, but I
did address them:

1. First, it is a third
validation of the
data I did—very
minor, but I
wanted to make
sure I triple-
checked that I
used the logs
correctly, since I
did the last
evaluation with
poor sleep. This
is a change you
will hardly notice

- after I make any updates.
2. Second, it is the images. I generated some images that I want to run through both of you. I have been so tight with time that I was only able to show them to Devroop in our meeting. I need to share them with you in the paper repo and provide you with my suggestions on where I think some of them should be placed.
 3. Lastly, I need to wrap up two tests I started working on, but I was not able to fully finish because the validation takes very long, which is the reason why I automated it, to avoid this in the near future.

If you want to set up a meeting for this week, feel free to do so. I will be free after Monday. Again, I apologize; I have been very busy with deadlines after I worked on the paper from Monday to Wednesday.

Best,
Piter

Hi Piter,

Did we decide when we were going to touch base next?
How's everything going?

Thanks
